

SUHANI PATEL

Ahmedabad, Gujarat, India – +91 78629 05466
suhani.patel1002@gmail.com – LinkedIn – GitHub – Portfolio

PROFILE

Product-focused Computer Engineering graduate with experience across business operations, product requirements, workflow automation, customer problem solving, and data analysis. Skilled in translating ambiguous user and business problems into structured requirements, prioritizing solutions, defining success metrics, and working cross-functionally from discovery through implementation. Hands-on experience with PRDs, BRDs, user stories, process design, KPI definition, Agile workflows, SQL, Python, Power BI, and stakeholder management.

EDUCATION

Pandit Deendayal Energy University, Gandhinagar

Bachelor of Technology in Computer Engineering

May 2026

GPA: 9.2/10

PRODUCT & TECHNICAL SKILLS

Product Management	Product Discovery, PRD, User Stories, User Personas, Customer Journey Mapping, Feature Prioritization, KPI Definition, Product Requirements, Acceptance Criteria, Roadmap Support
Business & Execution	Stakeholder Management, Requirements Gathering, BRD, FRD, SRS, Process Mapping, Root Cause Analysis, Gap Analysis, Agile/Scrum, Jira, SOP Development
Data & Analytics	SQL, Python, Power BI, Tableau, Google Apps Script, Exploratory Data Analysis, Dashboard Development, KPI Reporting, Data Validation

EXPERIENCE

Business Operations Analyst

Jul 2026 – Present

Ecoright

- Partner with Operations, Procurement, Warehouse, and Customer Support teams to identify user and operational pain points, gather requirements, and prioritize workflow improvements based on business impact.
- Led the redesign and automation of shipment processing and operational reporting workflows from problem discovery through implementation, reducing process cycle time by **25%** and improving downstream visibility.
- Built Google Apps Script automations for recurring workflows and reporting tasks, eliminating approximately **5–6 hours of manual work per week**.
- Translate stakeholder feedback into structured requirements, workflows, and solution specifications, balancing urgency, implementation effort, and operational value.
- Conduct root cause analysis to distinguish surface-level requests from underlying user problems before defining and validating solutions.
- Create SOPs and process documentation to improve product adoption, standardize workflows, and reduce dependency on manual knowledge transfer.

Research Intern

Jan 2026 – Apr 2026

Space Applications Centre, Indian Space Research Organisation (ISRO)

- Worked with large-scale weather datasets to transform unstructured research requirements into a reliable data and modeling pipeline for rainfall forecast bias correction.
- Developed and evaluated an enhanced **U-Net model with Squeeze-and-Excitation attention blocks** to improve Weather Research and Forecasting (WRF) model outputs.
- Defined evaluation criteria using **RMSD, bias, and correlation metrics** and compared model performance against baseline forecasts to support evidence-based model decisions.
- Communicated technical findings through clear visualizations and summaries, translating complex model results into insights usable by research stakeholders.

Business Analyst

Dec 2024 – Mar 2025

Forensic Knight

- Collaborated with product, business, and engineering stakeholders to gather user and business requirements, clarify feature scope, and support product planning.
- Converted stakeholder needs into **BRDs, FRDs, SRS documents, user flows, and functional requirements**, improving clarity across product and engineering handoffs.
- Supported feature definition by documenting workflows, dependencies, acceptance criteria, edge cases, and implementation requirements.
- Tracked product delivery, identified blockers and risks, and coordinated across teams in an Agile startup environment with frequently changing priorities.
- Helped evaluate proposed features against user needs, business objectives, implementation feasibility, and delivery constraints.

PRODUCT CASE STUDY

Domino's – Post-Order Customer Support Redesign

- Identified friction in Domino's post-order support journey and reframed the problem around reducing customer effort, resolution time, and trust loss after order issues.
- Designed a new complaint-resolution experience with item-level issue reporting and user-selectable resolution options to improve speed and transparency.
- Created user personas, customer journey maps, user stories, functional requirements, edge cases, and a complete **Product Requirements Document (PRD)**.
- Prioritized features using customer impact, business value, implementation effort, and frequency of pain points.
- Defined product success metrics including **complaint resolution rate, average resolution time, customer satisfaction, and escalation rate**.

PROJECTS

- Smart Factory OEE & Downtime Analysis | Power BI:** Built an interactive dashboard to monitor Overall Equipment Effectiveness, machine utilization, and downtime across operating conditions. Structured KPI views to help stakeholders identify bottlenecks, diagnose performance issues, and prioritize operational improvements.
- Walmart Sales Analysis | Python, Power BI:** Analyzed more than **\$6.7B** in sales across **45** stores using Python

and Power BI. Identified seasonal patterns, store-level performance differences, and key drivers of sales fluctuations to support data-informed business decisions.

- **Career Track Analysis | SQL, Tableau:** Analyzed **5,000+ student records** across three learning tracks to understand enrollment, progression, and completion behavior. Built an interactive Tableau dashboard to surface funnel patterns and completion timelines for stakeholder decision-making.

CERTIFICATIONS

- **Microsoft AI Product Management – Enterprise Product Management Fundamentals**, Coursera
- **Get Started with Jira**, Coursera

PUBLICATIONS

Suhani Patel et al. (2025), “Time Series Hybridization Model for Bias-Aware Rainfall Forecasting: SARIMAX-GBM Hybrid Model – A Case Study of Ahmedabad, India.” Manuscript under peer review; developed from applied research on hybrid statistical and machine-learning approaches to rainfall forecasting.

LEADERSHIP & ACTIVITIES

Content Writing Head, Cognitive Nexus – IEEE Computational Intelligence Society, PDEU: Led a content team translating complex machine learning and computational intelligence concepts into accessible educational content, coordinating ideation, review, and publication across contributors.
