

SUHANI PATEL

Ahmedabad, Gujarat, India – +91 78629 05466
suhani.patel1002@gmail.com – [LinkedIn](#) – [GitHub](#) – [Portfolio](#)

PROFILE

Product-focused Computer Engineering graduate with experience across product requirements, business operations, workflow automation, data analysis, and customer problem solving. Skilled at breaking ambiguous problems into structured requirements, identifying root causes, prioritizing solutions, and translating analysis into practical improvements. Hands-on experience with PRDs, user flows, KPI definition, Agile workflows, SQL, Python, Power BI, and stakeholder management.

EDUCATION

Pandit Deendayal Energy University, Gandhinagar
Bachelor of Technology in Computer Engineering

May 2026
GPA: 9.2/10

PRODUCT & TECHNICAL SKILLS

Product Management	Product Discovery, PRD, User Stories, User Personas, Customer Journey Mapping, Feature Prioritization, KPI Definition, Acceptance Criteria, Roadmap Support
Business & Execution	Requirements Gathering, BRD, FRD, SRS, Process Mapping, Root Cause Analysis, Gap Analysis, Stakeholder Management, Agile/Scrum, Jira, SOP Development
Data & Technical	SQL, Python, Power BI, Tableau, Google Apps Script, Exploratory Data Analysis, Dashboard Development, KPI Reporting, Data Validation

EXPERIENCE

Business Operations Analyst

Jul 2026 – Present

Ecoright

- Partner with Operations, Procurement, Warehouse, and Customer Support to identify operational pain points, gather requirements, and prioritize workflow improvements based on business impact.
- Led the redesign and automation of shipment processing and operational reporting from problem discovery through implementation, reducing process cycle time by **25%** and improving downstream visibility.
- Built Google Apps Script automations and standardized SOPs for recurring workflows, eliminating approximately **5–6 hours of manual work per week** while reducing dependency on manual knowledge transfer.

Machine Learning Research Intern

Jan 2026 – Apr 2026

Space Applications Centre, Indian Space Research Organisation (ISRO)

- Worked with large-scale weather datasets to turn an open-ended forecasting problem into a structured data and evaluation pipeline, identifying inconsistencies and preparing reliable inputs for analysis.
- Explored and evaluated an improved forecasting approach against existing WRF outputs, using defined performance criteria to determine where the approach improved results and where limitations remained.
- Translated complex research findings into clear visualizations and summaries, helping stakeholders understand model behavior, trade-offs, and implications without relying on implementation-level detail.

Research Analyst

May 2025 – Jun 2025

Indian Meteorological Centre

- Built an end-to-end rainfall forecasting approach by combining statistical and machine-learning methods to capture both recurring seasonal patterns and unusual rainfall behavior.
- Investigated data patterns, extreme events, and model stability to identify where conventional forecasting approaches struggled and introduced targeted improvements to address those gaps.
- Produced multi-year forecasts and diagnostic analyses, focusing on interpreting uncertainty and translating model behavior into findings that could support practical forecasting decisions.

Business Analyst

Dec 2024 – Mar 2025

Forensic Knight

- Collaborated with product, business, and engineering stakeholders to understand user needs, clarify feature scope, and support product planning in a fast-moving startup environment.
- Translated ambiguous stakeholder requirements into **BRDs, FRDs, SRS documents, user flows, acceptance criteria, and edge cases**, improving clarity across product and engineering handoffs.
- Tracked delivery, identified blockers and dependencies, and evaluated proposed features against user needs, business objectives, feasibility, and delivery constraints.

PRODUCT CASE STUDIES

- Domino's – Post-Order Customer Support Redesign:** Identified friction in post-order support and reframed the problem around customer effort, resolution time, and trust. Designed a guided, item-level resolution flow with user-selected outcomes and defined success metrics including resolution rate, resolution time, satisfaction, and escalation.
- Loans24 – Premises Verification:** Designed a guided, self-serve premises-verification journey to reduce manual follow-up while helping genuine customers complete evidence capture. Structured the MVP around user clarity, verification reliability, privacy, rollout risks, and measurable product outcomes.
- Automating Packaging Reorder Alerts:** Reframed a recurring stock-risk complaint into a rule-based decision system by combining inventory, production demand, purchase orders, and supplier lead times. Owned problem discovery, decision-logic design, Google Apps Script implementation, and rollout, replacing ad hoc review with automated alerts across tracked packaging items.

PROJECTS

- Factory OEE & Downtime Analysis | Power BI, Excel:** Analyzed machinery performance and operational readings to identify meaningful efficiency, utilization, quality, and maintenance KPIs; translated trends into dashboard views for bottleneck identification and improvement decisions.
- Career Track Analysis | SQL, Tableau:** Analyzed 5,000+ student records across three learning tracks to understand enrollment, progression, completion, and drop-off behavior; built a dashboard to surface funnel patterns and support decisions around engagement and course performance.
- Walmart Sales Analysis | Python, Power BI, Excel:** Analyzed more than \$6.7B in sales across 45 stores to identify seasonal patterns, regional differences, and drivers of performance; translated the analysis into an executive-friendly dashboard for faster KPI-driven decision-making.

- **Gesture-Based Drawing Application | Python, OpenCV, MediaPipe:** Built a real-time computer-vision interface that replaces traditional input devices with hand gestures, focusing on intuitive interaction, low-latency processing, and practical human-computer interaction.
- **Rainfall Prediction using Hybrid ML Model | Python, SARIMAX, Scikit-learn:** Developed a hybrid forecasting approach combining statistical seasonality with machine-learning residual modeling to improve rainfall prediction and handling of extreme events; achieved RMSE 1.18 and R^2 0.73 on the reported evaluation.
- **Smart Factory Failure Prediction | Python, Scikit-learn, Streamlit:** Built a predictive-maintenance application using sensor data to identify potential machine failures, explain key risk factors, and support proactive intervention; achieved ROC-AUC 0.98 and deployed predictions through an interactive web interface.

CERTIFICATIONS

- **AI Product Management**, Microsoft
- **Getting Started with Jira**, Coursera
- **Business Intelligence and Analytics**, NPTEL
- **Data Analytics Virtual Internship**, Deloitte

PUBLICATIONS

- **Improving rainfall forecasting accuracy in semi-arid Ahmedabad by combining statistical and machine learning methods.** Manuscript under review.
- **Development of Hybrid Weather Forecasting System using Dynamical and Machine Learning Model.** Manuscript under review.

LEADERSHIP & ACTIVITIES

- **Content Writing Head, Cognitive Nexus – IEEE Computational Intelligence Society, PDEU:** Led a content team translating complex machine learning and computational intelligence concepts into accessible educational content, coordinating ideation, review, and publication across contributors.
